

Business Requirement Document

ABC Automation | Stressed Asset Management | BRD/SAM/2026/014

THIS IS A TEST FILE. It exists only to exercise the signed-BRD upload on the Aikyam AI Team Tracker. The requirement, the figures and the signature below are invented.

1. Document control

Requesting vertical	Stressed Asset Management
Raised by	Sample Requestor (test account)
Date raised	08 September 2026
Priority	Medium
Version	1.0 - for AI team review

2. Background

The SAM desk currently tracks recovery actions on stressed accounts across three separate workbooks, one per resolution route. Each is updated by hand from email and call notes, so the same account often shows a different stage in two files. Preparing the monthly position for the committee takes roughly two working days and starts with reconciling the workbooks against each other rather than against the underlying records.

3. What is being asked for

A single tracked record per stressed account, with the resolution stage, the next action, its owner and its due date, so the committee pack can be produced from one source instead of three.

#	Requirement	Must / Should
R1	One record per account, with the resolution route as a field rather than a separate file	Must
R2	Stage history retained, so a change of route does not erase what happened before	Must
R3	Next action, owner and due date on every open account	Must
R4	Ageing view - how long an account has sat at its current stage	Must
R5	Monthly committee extract generated from the record, not retyped	Must
R6	Reminder to the action owner three working days before a due date	Should
R7	Read-only view for the Accounts team, without recovery notes	Should

4. Out of scope for this request

Valuation of the underlying security, any change to the provisioning calculation, and integration with the core broking system. These stay manual for now and may be raised separately.

5. Expected benefit

Time saved	About 12 hours a month across the desk, mostly on reconciliation
Error reduction	One record removes the stage mismatch between the three workbooks

Audit position

Every stage change carries a timestamp and the person who made it

6. Acceptance

The desk will accept the build when a full month is run entirely on the new record, the committee extract is produced from it without manual editing, and the three workbooks are retired.

7. Vertical head sign-off

I confirm this requirement has been reviewed and is approved for submission to the AI & Automation team.

A. Sample-Head

A. Sample-Head (placeholder - not a real person)
Head, Stressed Asset Management
